# GROUND-BREAKING SCIENTIFIC DISCOVERY

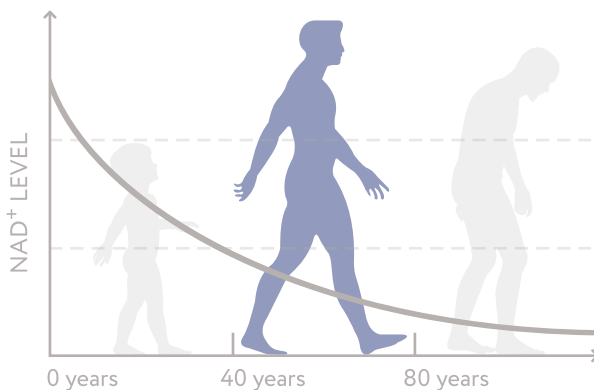

**1-MNA** is a substance that occurs naturally in the human body. It is formed as a result of the metabolism of niacin. Niacin takes part in the synthesis of the coenzymes **NAD<sup>+</sup>** and **NADP<sup>+</sup>**, which are found in numerous cells and are involved in a range of important processes in the body. In young cells and tissues, **NAD<sup>+</sup>** levels are higher, which is associated with better physical performance and cognitive abilities as well as more effective cell regeneration and repair. As we age, our body's ability to convert niacin to **1-MNA** decreases and the amount of coenzyme **NAD<sup>+</sup>** drops as well.

This process starts after the age of 30. It has been confirmed that between the ages of 40 and 60, **NAD<sup>+</sup> levels fall by up to 50%**. This results in slower cell production and ageing.

**1-MNA**, by optimizing **NAD<sup>+</sup>** levels, represents a new approach to this process.

The discovery of **1-MNA** is the result of many years of research at various research sites all over the world. Scientists from the United States, Germany, Switzerland, Spain, Poland, Sweden, Denmark, Japan, China and Australia have conducted hundreds of studies on the **1-MNA molecule**.

Over **50 world-renowned scientists** have been involved in researching and exploring the **1-MNA** molecule, and they continue to lead the scientific direction of our work.

# 1-MNA IN NATURE

**1-MNA** also occurs in natural sources and is found in a few food products in the diet. The richest known natural sources of **1-MNA** are **wakame brown algae** (*Undaria pinnatifida*) and **green tea leaves** (*Camellia sinensis*).

In order to supply with food an amount of **1-MNA** equivalent to 1 capsule of the **ENDOTELIO** dietary supplement, approximately 1 kg of wakame algae or green tea leaves would need to be consumed daily.

Thanks to our research, we were able to synthesize this valuable substance and demonstrate its safety, obtaining a positive opinion from the European Food Safety Authority (EFSA) and an authorization for the so-called “novel food.” As a result, we have developed the innovative dietary supplement **ENDOTELIO**, containing **1-MNA**.

# ABOUT US

Over 50 world-renowned scientists have been involved in the research and understanding of **1-MNA** molecule, and they continue to set the scientific direction for our efforts. We work with leaders in science and technology – pioneers in advancing a better approach to health. Our activities and partnerships with the international scientific community are the basis for product development and research.

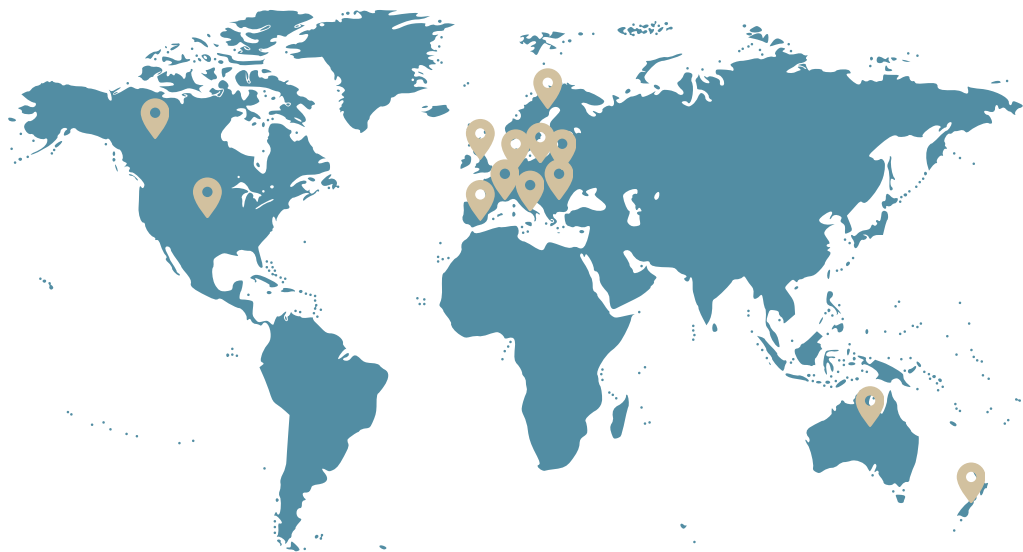

Our team constantly review the latest scientific literature related to proactive health. This enable us to conduct unique studies and project that directly translate into the products we offer.

The scientists involved in **1-MNA** research are experts in the field of **Life Science**. Their specialized knowledge allow us to create and implement innovative solutions. By collaborating with leading academic institutions, we maintain strong connection with the best researchers.

This is how **ENDOTELIO** was born – a dietary supplement recommended for those who want to enrich their diet with **1-MNA**.
